| | txt to doc. Shell Program 19: Write a Shell Script which will redirect the output of the date command without the time into a file. | |
| 10 | <p>Shell Programming</p> <p>Shell Program 20: Write a Shell Script to change the filename of all files in a directory from lower-case to upper- case.</p> <p>Shell Program 21: Write a Shell Script that examines each file in the current directory. Files whose names end in old are moved to a directory named old files and files whose names end in .c are moved to directory named cprograms.</p> <p>Shell Program 22: Write a shell script which reports names and sizes of all files in a directory (directory would be supplied as an argument to the shell script) whose size is exceeding 1000 bytes. The filenames should be printed in descending order of their sizes. The total number of such files should also be reported.</p> | 2 |
| 11 | <p>Shell Programming</p> <p>Shell Program 23: Write a shell script to identify all zero-byte files in the current directory and delete them. Before proceeding with deletion, the shell script should get a conformation from the user.</p> <p>Shell Program 24: A shell script receives even number of filenames. Suppose four filenames are supplied, then the first file should get copied into second file, the third file should get copied into fourth and so on. If odd number of filenames is supplied then no copying should take place and an error message should be displayed.</p> <p>Shell Program 25: Write a Shell Script that accepts only three arguments from the command line. The first argument is the pattern string, the second argument is the filename in which the pattern is to be searched and the third argument is the filename in which the result is to be stored.</p> | 2 |
| 12 | <p>Shell Programming</p> <p>Shell Program 26: Write a shell script for renaming each file in the directory such that it will have the current shell PID as an extension. The shell script should ensure that the directories do not get renamed.</p> <p>Shell Program 27: Write a shell script that will receive any number of filenames as arguments. The shell script should check whether such files already exist. If they do, then it should be reported. The files that do not exist should be created in a sub-directory called mydir. The shell script should first check whether the sub-directory mydir exists in the current directory. If it doesn't exist, then it should be created. If mydir already exists, then it should be reported along with the number of files that are currently present in mydir.</p> | 2 |

| Course Code: IFT2105 | | Course Title: Mathematics Paper 1 | | | |
| Total Credits | 3 | Theory Hrs. Per Week | 3 | Tutorial | 0 |

Course Objective:

The objective of this course is to provide an introduction to the fundamentals and concepts of basic mathematics covering sets, functions, differentiation, integration, vectors and matrices. This course aims to assist the students to develop confidence in handling mathematical concepts and techniques and to understand the principles and uses of differential and integral calculus.

| Module Number | Topics | No Hrs. |
|---------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------|
| 1 | Module I: Sets Sets and subsets, finite and infinite sets. Algebra of sets: Union, Intersection, complementation, Demorgan laws, Common applications of algebra of sets. Functions: Interval and sub-intervals. Definition of function and examples, polynomial, rational, exponential, logarithmic and trigonometric functions. Graph of some simple functions like polynomial (upto 3 rd deg), rational, trigonometric functions, modulus, function, step functions, rational functions, composite functions, Limit of a function. | 6 |
| 2 | Module II: Differentiation Differentiation of function, Derivative of some common functions, polynomial, rational, exponential, Logarithmic and trigonometric functions. Successive differentiation, Leibnitz theorem. | 10 |
| 3 | Module III: Integration Integration as inverse process of differentiation, integration of simple functions, method of change of variable and substitution for integrals, definite integrals, simple problems of line integral. | 10 |
| 4 | Module IV: Vectors Vector, Vector Algebra: addition, subtraction, Scalar Multiplication. Magnitude, Vector multiplication, Simple application of Vectors. Matrices: Matrix, Submatrix, types of matrices, such as symmetric, square, diagonal matrices, singular and nonsingular matrices. Addition, Subtraction, multiplication of matrices, Rank of matrix, Matrix equation, Solution by Cramer's rule and Gauss elimination method. | 10 |

| Total Credits | 1 | Practical Hrs. Per Week | 2 | Tutorial | 0 |

| Module Number | Topics | No Hrs. |
|---------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------|
| 1 | <p>Q1 Develop static web pages of online book store</p> <p>Q2 Use tables to lay-out a page The title of this webpage is "Using Forms". This should be shown in the title bar. The header "User Information" is a type 1 header; use the <h1> tag. The textarea for the address has 4 rows and 20 columns.</p> <ul style="list-style-type: none"> ■ The textbox for the password is a password textbox. ■ The radiobutton for the Male gender is initially checked ■ The radiobutton for Part-time status is initially checked. ■ The checkboxes for subjects ICS 21, ICS22, and ICS34 are initially checked. ■ The drow-down dialogue box for year and course should contain BSCS-1, BSCS-2, BSCS-3, and BSCS-4, but BSCS-2 should be initially chosen. ■ Save this file as htmlex4.html. | 2 |
| 2 | <p>Q3 Validate the Registration using Java script</p> <p>Q4 Create a basic web page following a set pattern</p> <p>Your page should have the following elements:</p> <ul style="list-style-type: none"> • Your name as a level one header • "About me" as a level two header • A short paragraph describing something interesting about yourself • A level two heading saying something like "My Favorite things on the Internet" • A paragraph describing the things you like to do on the Internet | 2 |
| 3 | <p>Q5 Write down the CSS that would set the default color to blue for Level 2 headings (i.e. <h2> elements) in a document.</p> <p>Q6. You are required to use div elements and CSS to achieve the layout. Create each page with the following layout</p> | 2 |
| 4 | <p>Q 7. Create XML document for user information</p> <p>Q 8. Write a DTD for an XML document type that should store the marks attained by each student on each module they take. Each student has a title (Mr, Mrs, Ms or Miss), a name, and an email address (which is guaranteed to be unique). For each mark it is sufficient to associate it with a module code (e.g. CC213), it is not necessary to give any further details of the module.</p> | 2 |
| 5 | <p>Q9. Design and sketch a web-based input form that would allow an administrator to input and edit the marks that a student has attained on each module (assume that</p> | 2 |

| | | |
|--|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---|
| | <p>the administrator has already logged in to the system).</p> <p>Q10 Describe the basic syntax of CSS with the aid of an example that would set the default color to red for normal paragraph text.</p> | |
| | <p>Q 11 Create a CSS file to render your XML data, and an XML file linking to it. Call it filename_css.xml and filename.css</p> <p>Q12. Given that the <pre> tag in HTML is used to present text such as program code, explain the following CSS declaration, and Suggest a likely purpose for it: pre.codebox {border: solid;padding: 0.5em;}</p> | 2 |
| | <p>Q13. Explain the various parts of the following HTML document, including the definition and usage of the JavaScript code, and describe the appearance of the web page it creates (the line numbers are for you to refer to, and are not part of the HTML).</p> <pre> <html> <head> <script type="text/javascript"><!-- messages = ["Hello", "G'day", "Ola", "Bonjour"]; function hello(){ var rand = Math.floor(messages.length*Math.random()); document.write(messages[rand]); } // --> </script> <title>Greeting</title> </head> <body> <h1> <script type="text/javascript"><!-- hello(); //--> </script> <noscript> Hello </noscript> World. </h1> </body> </html> </pre> <p>Q14. Identify the types of HTML tags used as form input elements (including the buttons), and describe the validation you would perform on the client.</p> | 2 |
| | <p>Q15. The XML document shown below is intended to mark-up data relating to a CD music catalogue. The XML describes the fact that the artist Bob Dylan released an album called desire in 1976.</p> <pre> <Catalogue> <BobDylan desire = "1976" /> </Catalogue> </pre> | 2 |

| | <p>Ignoring the ellipses (i.e., the '...'), state with reasons whether the document is well formed XML.</p> <p>Q 16. Write a JavaScript function which receives a day number in its parameter list and returns a string upon execution. The string returned must be the Week day corresponding to day number OR "invalid day number"</p> | | | | | | | | | | | | | | | | | |
|----------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------|-------------|----------------|-------------------|---|--------|---|---------|---|-----------|---|----------|---|--------|---|----------|---|
| | <p>Q17. Write the JavaScript code necessary to prompt for a day number via a dialog box, process the day number via the function defined in part b) above, then display the returned string via a dialog box.</p> <p>Q 18. Write JavaScript code to generate a simple table that displays each day of the numbers from 1 to 7 in the first column and its corresponding day of the week (using the function defined in part b) in the second column as shown below:</p> <table><tr><th>Day no.</th><th>Day of Week</th></tr><tr><td>1</td><td>Sunday</td></tr><tr><td>2</td><td>Monday</td></tr><tr><td>3</td><td>Tuesday</td></tr><tr><td>4</td><td>Wednesday</td></tr><tr><td>5</td><td>Thursday</td></tr><tr><td>6</td><td>Friday</td></tr><tr><td>7</td><td>Saturday</td></tr></table> | Day no. | Day of Week | 1 | Sunday | 2 | Monday | 3 | Tuesday | 4 | Wednesday | 5 | Thursday | 6 | Friday | 7 | Saturday | 2 |
| Day no. | Day of Week | | | | | | | | | | | | | | | | | |
| 1 | Sunday | | | | | | | | | | | | | | | | | |
| 2 | Monday | | | | | | | | | | | | | | | | | |
| 3 | Tuesday | | | | | | | | | | | | | | | | | |
| 4 | Wednesday | | | | | | | | | | | | | | | | | |
| 5 | Thursday | | | | | | | | | | | | | | | | | |
| 6 | Friday | | | | | | | | | | | | | | | | | |
| 7 | Saturday | | | | | | | | | | | | | | | | | |
| | <p>Q19. Define a CSS class specific to the <h3> tag where the text is teal colored, Times Roman font, 24 point in size, background color is white, and the element is enclosed in a box with double lines</p> <p>Q20 Text shadowing can be achieved using CSS properties which control positioning. Define two CSS rules, namely #banner and #shadow</p> <p>Q</p> | 2 | | | | | | | | | | | | | | | | |
| | <p>21 Define a CSS rule which shows text with a line through it, the text being red in color and in italics, such that the rule can be applied to an inline element</p> <p>Q22 The following frameset diagram has a title bar (source titlebar.html) that occupies 15% of the vertical space of the window, a list of internal navigation links (source - navbar.html) and a destination frame (initial source - start.html) which occupy 20% and 80% of the horizontal space respectively.</p> <table><tr><td colspan="2">Title Bar</td></tr><tr><td>Navigation Bar</td><td>Destination Frame</td></tr></table> <p>Clicking links from the navigation bar will cause the page to be loaded into the destination frame.</p> <p>Write the complete frameset document to the above specification</p> | Title Bar | | Navigation Bar | Destination Frame | 2 | | | | | | | | | | | | |
| Title Bar | | | | | | | | | | | | | | | | | | |
| Navigation Bar | Destination Frame | | | | | | | | | | | | | | | | | |

| | | |
|--|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---|
| | | |
| | <p>Q23. Supply well written HTML code to generate the following Web Page. The page contains an image 'feral.jpg'(180x120pixels). The email address is n.mcewan@latrobe.edu.au and the 'home', 'history' 'photos' and 'movies'links are hypertext links to feralracing.html, racehistory.html and two named anchor tags (photos & movies) withinmultimedia.html respectively. The NHRA online link is a hypertext link to http://nhra.com. This web page makes use of only one table and has a background image ' yellowCudaBG.jpg'.</p> <p>Q24. Design a web page and your page should have the following elements:</p> <ul style="list-style-type: none"> • Your name as a level one header • "About me" as a level two header • A short paragraph describing something interesting about yourself • A level two heading saying something like "My Favorite things on the Internet" • A paragraph describing the things you like to do on the Internet | 2 |
| | <p>Q25. Write a complete web page which requires the user to input a month number. When the user pressesa button labeled "determine month number", the name of the month will be displayed in a box on thecurrent webpage. Should the user enter an inappropriate month number, an appropriate message will bedisplayed in the box where the month name appears. If there is no entry for the month number when thebutton is pressed, a dialog box must appear which indicates that an entry must be made.</p> <p>Q26. Design a page given below :-- Choose the colour you would like: Red, Blue, Orange, Green Choose the design you would like: This is Design 1</p>  | 2 |

| Course Code: IFT2107 | | Course Title: C++ Programming | | | |
| Total Credits | 3 | Theory | 3 | Tutorial | 0 |

| Module No. | Topics | No Hrs. |
|------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------|
| 1 | Module I: Overview of C++ What is Object Oriented Programming, Characteristics of OOP, Difference between C and C++. Basics:-Input/Output in C++ using cin/cout, Preprocessor Directives, Data Types-Integer, Float, character, Enumerated data types, library functions, comments, storage classes, manipulators, type conversion, arithmetic operators, arrays and strings. | 6 |
| 2 | Module II: Classes and objects Functions: Simple functions, passing arguments to functions, returning values from functions, reference arguments, returning by reference, Overloaded functions, Inline functions, Structures, defining the structure variable, assessing members of structure, assessing structure members using pointers Classes and objects: A simple class, C++ objects as physical objects, objects as function arguments, returning objects from functions, static class data, array as class data member, array of objects. | 10 |
| 3 | Module III: Inheritance Inheritance, Types of Inheritance, access modes - public, private & protected, Abstract Classes, Ambiguity resolution using scope resolution operator and Virtual base class, Constructors, Destructors, copy constructor, Dynamic constructor. | 10 |
| 4 | Module IV: Polymorphism Polymorphism, Type of Polymorphism - Compile time and runtime, Function Overloading, Operator Overloading (Unary and Binary) Polymorphism by parameter, Pointer to objects, this pointer, Virtual Functions, pure virtual functions. | 10 |
| 5 | Module V: Files and Exception Handling and I/O Files and Streams: streams, string I/O, character I/O, file pointer, error handling, command line arguments. formatted and Unformatted Input output. Exception Handling: Try catch block, rethrowing exception. | 10 |

| Assignment Number | Topics | No Hrs. |
|-------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------|
| 1 | WAP to calculate factorial of a given number n. | 2 |
| | WAP to do the following: a. Generate the following menu: 1. Add two numbers. 2. Subtract two numbers. 3. Multiply two numbers. 4. Divide two numbers. 5. Exit. b. Ask the user to input two integers and then input a choice from the menu. Perform all the arithmetic operations which have been offered by the menu. Checks for errors caused due to inappropriate entry by user and output a statement accordingly. | |
| 2 | WAP to read a set of numbers in an array & to find the largest of them. | 2 |
| | WAP to exchange contents of two variables using call by value. | |
| 3 | WAP to exchange contents of two variables using call by reference. | 2 |
| | Calculate area of different geometrical figures (circle, rectangle, square, triangle) using function overloading. | |
| 4 | WAP to add two complex numbers using friend function. | 2 |
| | WAP to maintain the student record which contains Roll number, Name, Marks1, Marks2, Marks3 as data member and getdata(), display() and setdata() as member functions. | |
| 5 | WAP to increment the employee salaries on the basis of there designation (Manager-5000, General Manager-10000, CEO-20000, worker-2000). Use employee name, id, designation and salary as data member and inc_sal as member function (Use array of object). | 2 |
| | Write a class bank, containing data member: Name of Depositor, A/c type, Type of A/c, Balance amount. Member function: To assign initial value, To deposit an amount, to withdraw an amount after checking the balance (which should be greater than Rs. 500) , To display name & balance. | |
| 6 | WAP to define nested class 'student_info' which contains data members such as name, roll number and sex and also consists of one more class 'date' ,whose data members are day, month and year. The data is to be read from the keyboard & displayed on the screen. | 2 |
| | WAP to generate a series of Fibonacci numbers using copy constructor, where it is defined outside the class using scope resolution operator. | |
| 7 | Write a class string to compare two strings, overload (==) operator. | 2 |
| | Write a class to concatenate two strings, overload (+) operator. | |
| 8 | Create a class item, having two data members x & y, overload '-'(unary operator) to change the sign of x and y. | 2 |
| | Create a class Employee. Derive 3 classes from this class namely, Programmer, Analyst & Project Leader. Take attributes and operations on your own. WAP to implement this with array of pointers. | |
| 9 | Create two classes namely Employee and Qualification. Using multiple inheritance derive two classes Scientist and Manager. Take suitable attributes & operations. | 2 |
| | WAP to implement this class hierarchy. | |

| | | |
|----|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---|
| 10 | WAP to creat a class student containing Name & class as parameters, create another class marks which inherit student class taking own data members as mark1 & mark2 &show result. | 2 |
| 11 | WAP to read data from keyboard & write it to the file. After writing is completed, the file is closed. The program again opens the same file and reads it. | 2 |

| Module Number | Topics | | | | No Hrs. |
| 1 | Module I. Linear Systems and Gaussian Elimination: Linear systems. Matrix representation of linear systems. Gaussian-Jordan elimination. Homogeneous linear systems. Row echelon form and the General solution. Row rank of a matrix and solution sets of homogeneous linear systems and general linear systems. Elementary matrices. | | | | 6 |
| 2 | Module II. Vector Spaces: Definition, examples and basic properties. Subspaces. Linear independence. Linear combinations and span. Basis and dimension. Sum and intersection of subspaces. Direct sum of subspaces. | | | | 10 |
| 3 | Module III. Linear Transformations: Definition and examples. Properties of linear transformations. Rank and kernel. The rank and nullity of a matrix. The matrix representation of a linear transformation. Change of basis. Isomorphism. | | | | 10 |
| 4 | Module IV. Orthogonality in Vector Spaces: Scalar products in R^n and C^n . Complex matrices and orthogonality in C^n . Inner product spaces. Orthogonality in inner product spaces. Normed linear spaces. Inner product on complex vector spaces. Orthogonal complements. Orthogonal sets and the Gram-Schmidt process. Unitary matrices. | | | | 10 |
| 5 | Module V. Eigenvalues and Eigenvectors: Eigenvalues and eigenvectors. Characteristic equation and polynomial. Eigenvectors and eigenvalues of linear transformations. Similar matrices and diagonalization. Triangolizable matrices. Eigenvalues and eigenvectors of symmetric and Hermitian matrices. | | | | 4 |

| Total Credits | 1 | Practical : 1 | Tutorial: 0 |
| Assignment Number | Topics | | No Hrs. |
| 1 | Create the following table Employee with fields EmpID, E_NAME, SALARY,JOB,DB,DOJ. | | 2 |
| | a. Find all the Employees who has DOB between 1 Jan 1996 to 1 Jan 2000. b. Find all the distinct DeptID in Employee table and department table. | | |
| 2 | a. Find name of all employees who’s working in DeptID 2. b. Find all the employees that are not associated with DeptID 2 and 3. | | |
| | a. Find total number of employees and total number of departments. b. Find different number of jobs available. | | |
| 3 | a. Find the details of Employees who’s not working as Software Engineer. b. Find the ID of those Employees whose job is Software Engineer and Salary is greater than 100000. | | 2 |
| | a. Hike salary of employee by 20% with position Software Engineer. b. Change DeptID to 3 whose job is Software Engineer and Salary > 50000. c. Change EmpName to xyz where EmpID is 2304 and salary not equal to 30000. | | |
| 4 | a. Find EmpID where salary is highest. b. Find second highest salary. c. Find EmpID of employees with second highest salary. d. Decrease the salary by 10% of employee who is getting second highest salary. | | 2 |
| | a. Select all employees that are not associated with any department. b. Select all departments with no employees. c. Find the names of employee working in department IT. | | |
| 5 | Create the following(s)table Salespeople with fields snum, sname, city, commission Orders table with fields onum, odate, snum, amt Customers table with fields cnum, cname, city, rating, snum | | 2 |
| | a. Display name & city of salesman where city is“Pune”. b. Display the numbers of sales persons, with orders currently in the orders table without any repeats. | | |
| 6 | a. List all customers not having city “Pune” or rating more than100 b. Display all customers excluding those, with rating less than equal to 100, unless they are located in “Nagar”. | | 2 |
| | a. Assume each salesperson has a 12% commission on order amt. Display orderno, snum, commission for thatorder. b. Display the count of snum in order table without duplication of snum. | | |
| 7 | 1. Create a table with the under-mentioned structure (Table name isEmp) EmpNo NUMBER(4) DeptNo NUMBER(2) EmpName CHAR(10) Job CHAR(10) Manager NUMBER(4) HireDate DATE Salary NUMBER(7,2) | | 2 |

| Course Code: IFT2209 | | Course Title: Data Structures using C++ Lab | | | |
| Total Credits | 1 | Practical | 2 | Tutorial | 0 |
| Assignment Number | Topics | | | | No Hrs. |
| 1 | Write a program to remove all the duplicate elements present in the given array. Write a program to search an element using Linear Search. Write a program to search an element using Binary Search. Write a program to sort the given array using Bubble Sort. Write a program to sort the given array using Selection Sort. | | | | 5 |
| 2 | Write a program to sort the given array using Insertion Sort. Write a program to insert a new element in the given sorted array at proper place. Write a program to delete an element from given sorted array. Write a program to perform addition of two matrices. Write a program to perform multiplication of two matrices. | | | | 5 |
| 3 | Write a program to find out transpose of a given matrix. Write a program to implement Stack using array, also show overflow and underflow in respective push and pop operations. Write a program to implement Queue using array, which shows insertion and deletion operations. Write a program to implement Circular Queue using array, which shows insertion and deletion operations. Write a program to implement Linear Linked List, showing all the operations, like creation, display, insertion, deletion and searching. | | | | 5 |
| 4 | Write a program to implement Stack, using Linked List. Implement Push, Pop and display operations. Write a program to implement Queue, using Linked List. Implement Insertion, deletion and display operations. Write a program to count the number of times an item is present in a linked list. | | | | 5 |
| 5 | Write a program to increment the data part of every node present in a linked list by 10. Display the data both before incrimination and after. Write a program to implement Doubly Linked List, showing all the operations, like creation, display, insertion, deletion and searching. | | | | 5 |
| 6 | Write a program to create a Binary Search Tree and display its contents using preorder, postorder and inorder traversal. Write a program to implement insert, delete and search operations in a Binary Search Tree | | | | 5 |

| Lab Course Code: IFT2210 | | Lab work Course Title: Python Programming Lab | |
| Total Credits | 1 | Practical : 2 Hrs per Week | Tutorial: 00 |
| Assignment Number | Topics | | No Hrs. |
| 1 | <u>Python Basics</u> <ol style="list-style-type: none"> 1. Write a python program to generate a simple calculator. 2. Write a python program to find the sum of the first five terms of the Fibonacci series. 3. Write a python program to swap the values of two variables and later print the new value. 4. Write a python program to find the square root of a number. 5. Write a python program that prints the area and circumference of a circle given the radius of the circle as the input. 6. An Armstrong number is a number that is equal to the sum of cubes of its digits. For example 0, 1, 153, 370, 371 and 407 are Armstrong numbers. Write a python program to find out whether a number entered is Armstrong number or not. | | 2 |
| 2 | <u>Strings:</u> <ol style="list-style-type: none"> 7. Write a python program to implement slicing of strings. 8. Write a python program to add 'ed' at the end of a given verb string (length should be at least 3). If the given string already ends with 'ed' then leave it unchanged. Sample String : 'walk' Expected Result : 'walked' Sample String : 'tied' Expected Result : 'tied' 9. Write a version of a palindrome recognizer that also accepts phrase palindromes such as "Go hang a salami I'm a lasagna hog.", "Was it a rat I saw?", "Step on no pets", "Sit on a potato pan, Otis", "Lisa Bonet ate no basil", "Satan, oscillate my metallic sonatas", "I roamed under it as a tired nude Maori", "Rise to vote sir", or the exclamation "Dammit, I'm mad!". Note that punctuation, capitalization, and spacing are usually ignored. 10. A pangram is a sentence that contains all the letters of the English alphabet at least once, for example: The quick brown fox jumps over the lazy dog. Your task here is to write a function to check a sentence to see if it is a pangram or not. 11. In cryptography, a Caesar cipher is a very simple encryption techniques in which each letter in the plain text is replaced by a letter some fixed number of positions down the alphabet. For example, with a shift of 3, A would be replaced by D, B would become E, and so on. The method is named after Julius Caesar, who used it to communicate with his generals. ROT-13 ("rotate by 13 places") is a widely used example of a Caesar cipher where the shift is 13. In Python, the key for ROT-13 may be represented by means of the following dictionary: key = {'a':'n', 'b':'o', 'c':'p', 'd':'q', 'e':'r', 'f':'s', 'g':'t', 'h':'u', 'i':'v', 'j':'w', 'k':'x', 'l':'y', 'm':'z', 'n':'a', 'o':'b', 'p':'c', 'q':'d', 'r':'e', 's':'f', 't':'g', 'u':'h', 'v':'i', 'w':'j', 'x':'k', 'y':'l', 'z':'m', 'A':'N', 'B':'O', 'C':'P', 'D':'Q', 'E':'R', 'F':'S', 'G':'T', 'H':'U', 'I':'V', 'J':'W', 'K':'X', 'L':'Y', 'M':'Z', 'N':'A', 'O':'B', 'P':'C', 'Q':'D', 'R':'E', 'S':'F', 'T':'G', 'U':'H', 'V':'I', 'W':'J', 'X':'K', 'Y':'L', 'Z':'M'} Your task in this exercise is to implement an encoder/decoder of ROT-13. Once you're done, you will be able to read the following secret message: Pnrfnepvcure? V zhpucersrePnrfnefnynq! | | 2 |

| | | |
|----|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---|
| | Note that since English has 26 characters, your ROT-13 program will be able to both encode and decode texts written in English. | |
| 3. | <p><u>Dictionary:</u></p> <p>12. Given a dictionary of students and their favorite colours: people={'Arham':'Blue','Lisa':'Yellow','Vinod':'Purple','Jenny':'Pink'}</p> <ol style="list-style-type: none"> Find out how many students are in the list Change Lisa's favourite colour Remove 'Jenny' and her favourite colour Sort and print students and their favourite colours alphabetically by name <p><u>List :</u></p> <p>13. Write a python program that takes two lists as input and prints the common elements from the two lists in a third list (Output).</p> <p>14. Write a Python program to get a list, sorted in increasing order by the last element in each tuple from a given list of non-empty tuples. Input : [(12, 15), (11, 12), (14, 14), (12, 13), (12, 11)] Expected Output : [(12, 11), (11, 12), (12, 13), (14, 14), (12, 15)]</p> | |
| 4. | <p><u>Python Decision Making</u></p> <p>15. Write a Python program which iterates the integers from 1 to 20. Prints a string "Hi" for multiples of four, prints "Hello" instead of the number for the multiples of five and print "How are you" for numbers which are multiples of both four and five.</p> <p>16. Write a python program to perform the following operations on a list of numbers. (i) Linear Search (ii) Binary Search</p> <p><u>Python Loops:</u></p> <p>17. Using for loop, write and run a Python program for this algorithm. Here is an algorithm to print out n! (n factorial) from 0! to 10! :</p> <ol style="list-style-type: none"> Set f = 1 Set n = 0 Repeat the following 10 times <p>18. Write a Python program to print the following alphabets pattern : "A","D","L","T".</p> | 2 |
| 5. | <p><u>Functions & Methods:</u></p> <p>19. Define a function overlapping() that takes two lists and returns True if they have at least one member in common, False otherwise.</p> <p>20. Generate a function to calculate sum from 1 to x (i.e 1+2+3+.....x). Implement recursion for the same.</p> <p>21. Write a Python function that accepts a string and calculate the number of upper case letters and lower case letters.</p> | 2 |
| 6. | <p><u>Files</u></p> <p>22. Write a python program to find the Hash of the file</p> <p>23. Write a python program to read a file line by line and store the contents in a (i) variable (ii) list (iii) array</p> <p>24. Write a Python program to remove newline characters from a file</p> | 2 |

| | | |
|-----|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---|
| | | |
| 7. | Object Oriented Programming | 2 |
| | <p>25. Python supports different programming approaches. One of the popular approaches to solve a programming problem is by creating objects. This is known as Object-Oriented Programming (OOP). An object has attributes and it exhibits some behavior.</p> <p>Taking an example a “Girl” as an object, consider the following characteristics of the object and perform the following operations further. Attribute: Name, Age, Height Behavior : Studying, Playing, Dancing</p> <p>Write a python code to demonstrate the following operation with regards to the context given:</p> <ol style="list-style-type: none"> Creation of class and objects Creation of methods Use of Inheritance Data Encapsulation Polymorphism | |
| 8. | Regular Expression Operation | 2 |
| | <p>26. Write a python code to find the occurrence of “ing” in the string.</p> <p>27. Write a python program that finds whether a string starts with a word or a blank space. The expected output is “Match Found” if the string starts with the word otherwise “No match”.</p> <p>28. A network administrator decides to write an IP address in a particular format. He does not want to keep the leading zeroes in an IP address. e.g If the input IP address is 192.08.09.34 the output should be 192.8.9.34. Write a Python code to help the network administrator achieve this.</p> | |
| 9. | Python Network Programming | 2 |
| | <p>29. Write a Python program to create a network architecture by implementation of</p> <ol style="list-style-type: none"> simple client simple server <p>Using Socket Programming.</p> | |
| 10. | Python Database Connections & Python Data Processing and Encoding | 2 |
| | <p>30. Write a Python program to read specific columns of a given CSV file and print the content of the columns.</p> <p>31. Write a Python program to create a SQLite database and connect with the database and print the version of the SQLite database</p> | |
| 11 | Data Visualization using Matplotlib and Seaborn | 2 |
| | <p>32. Import an appropriate dataset and plot the different chart as mentioned</p> <p>Histogram Column Chart Box Plot Chart Pie Chart</p> | |

| | | |
|-----|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---|
| | <p>Scatter plot</p> <p>33. Import an appropriate dataset and visualize statistical relationships using Seaborn plotting functions.</p> | |
| 12. | GUI Development using tkinter | 2 |
| | <p>34. Write a Python GUI Program to import Tkinter package and</p> <ol style="list-style-type: none"> Create a window and set its title. Add a label to the window Change the label font style (font name, bold, size) using tkinter module Set the default window size Disable to resize the window | |
